

Biotechnology Laboratory Technician Program

Bates offers a 22 month program leading to an Associate of Technology degree. Training at Bates takes place in an environment that is designed to replicate, as closely as possible, the actual real-world work place. Bates Technical College will train you on the same equipment that you will find in the biotech industry. Other unique features of the Bates program are:

- No prior science experience or training is required. Everything you need to know you will learn during the 22-month program.
- Bates is the first college in Washington State to guarantee its career training programs. Bates guarantees that a graduate has mastered job competencies at industry entry-level standard or better, or the graduate can return to Bates for one quarter of tuition-free training!
- Bates Technical College operates on an open enrollment system. You can start classes on any Monday from September through July.

Faculty: Kelly Lee Hamilton, MS
